fit-out solutions
for education

SWIFT HORSMAN 

Integrated fit-out solutions for education

Swift Horsman has developed a range of innovative solutions specifically for the education sector - responding to the exacting demands of clients and contractors operating within the BSF, academies and primary programmes.

We have kept innovation at the core of our business by developing a range of robust and competitive products and services to meet the changing needs of the education sector. As a result we are able to deliver high quality products on time and within tight budgets while responding to growing needs for whole life value, sustainability and maximising opportunities for local employment in project delivery.

Understanding the need for greater integration across work packages, we have broken down conventional boundaries to develop truly integrated solutions by working hand in hand with our supply-chain during product development.

The relationships that we have established with supply-chain partners continue through into delivery thus reducing risk at all stages in the construction process. No other solutions offer such complete integration.

Flexible delivery solutions

From enquiry to installation, we work in partnership with our clients and our supply-chain to ensure that we are uniquely placed to provide a delivery solution tailored to your specific requirements. With flexibility in mind we are able to offer a broad range of options from fully managed turn-key solutions, (design, manufacture and installation) through to the supply only of certain product ranges.

Supply & Train™ offers a unique service specifically developed to respond both to the growing need to use local labour on many public sector projects and to the skilled labour shortages in key trades. By exploiting the designed-in simplicity of our products we can provide the necessary training, either on site or in our award winning Swift Training School, enabling you to achieve the expert installation of our products using your chosen labour force.

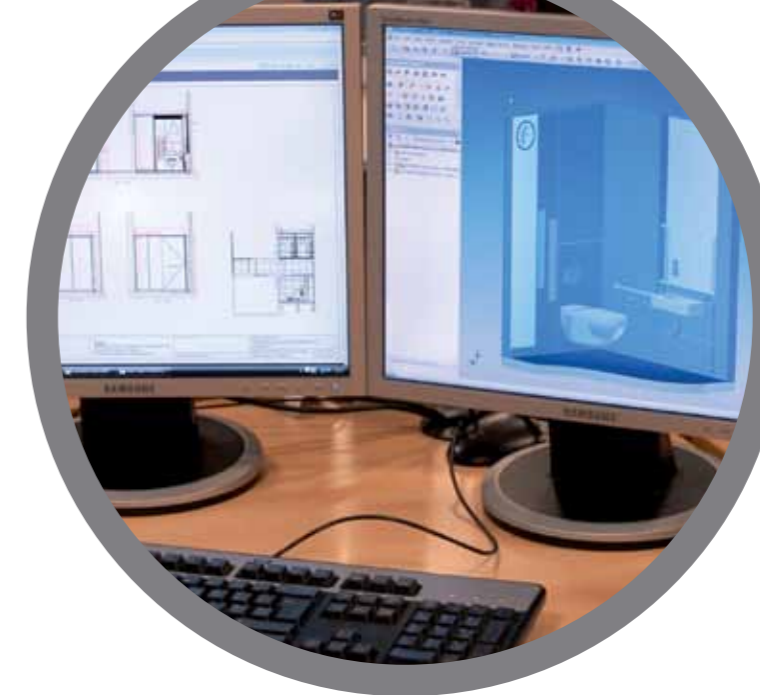

Integrated supply-chain

As a contracting business we understand the project risks associated with the integration of products and services on-site during construction. To eliminate as many of these risks as possible we have taken a considerable volume of work off-site by working closely with our key supply-chain partners to develop a range of unique and truly integrated solutions.

Greater integration with our supply-chain at this early stage has enabled us to deliver highly innovative products and services that offer improved efficiency, improved quality and reduced programme risk.

Partnerships

Proving that supply-chain integration works:

Design & prefabrication

Design is key to the success of every project we undertake. Ensuring that all aspects of our work are correctly coordinated, dimensioned and detailed is essential to the efficient execution of our work packages. We have established industry leading 3D design processes and systems to manage the interface with our customers and suppliers. This encourages a shared culture that embraces design for manufacture and assembly at every opportunity.

As part of our commitment to off-site manufacture we have invested in 250,000 sq ft of manufacturing facility to ensure that we can deliver an increasing range of flexible, cost effective solutions for clients wishing to benefit from the programming, quality and environmental benefits of prefabrication on construction projects.

Innovation & sustainability

Swift Horsman has a unique approach to innovation and sustainability. By working openly in collaboration with clients and supply-chain partners for mutual benefit, we ensure that the most efficient, sustainable and appropriate solutions can be found for every project undertaken.

Innovation is not just about new designs; it is about saving money for our clients and driving new standards in our industry. We innovate to improve safety and our environmental profile just as much as we do to improve our efficiency and quality.

Our increased use of off-site manufacture, combined with ISO 14001 accreditation and FSC certification highlights the sustainability credentials of our products and services. We are also leaders in the development and manufacture of innovative high quality products from recycled waste streams, which are themselves fully recyclable, supporting both superior BREEAM performance and reduced site waste management.

Engineered for education

SCHOOL TOILETS

School toilets have become a central focus in defining good school design. Swift IPS™ is a truly unique integrated and sustainable washroom solution designed to meet the complex functionality, build quality and environmental impact criteria set out within all modern education programmes.

SWIFT IPS™

INTEGRATED M&E

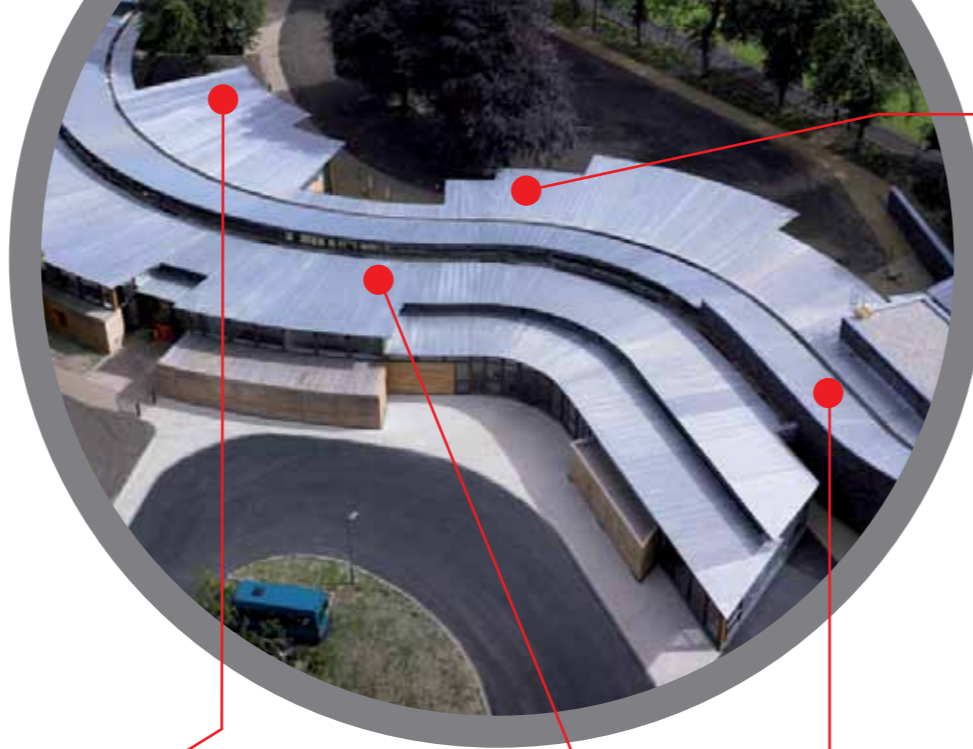

Our modular M&E building service solutions; pipework modules, valve sets, integrated and modular plumbing units and ceiling modules, utilise innovative systems and materials to bring real benefits, from off-site testing to true integration of different work packages.

SCHOOL LABORATORIES

Labwall™ is a development of the market leading Podwall® system. It incorporates all laboratory services including gas, water, waste and electricity within the wall structures to greatly simplify installation and to offer future flexibility.

LABWALL™

GENERAL JOINERY

Swift Horsman is uniquely placed to deliver a complete range of market leading fit-out solutions throughout the school from full height glazed screens to fully certified FSC timber cladding and state of the art catering and canteen fit-out.

DRY-LINING

Swiftwall™ improves the speed of dry-lining installation, maximises the opportunities for off-site technology and minimises on-site wet trades. Swiftwall™ is more environmentally friendly than traditional methods and offers greater flexibility to the designer and the end user both now and in the future as needs change.

SWIFTWALL™

DOORSETS

We offer the most comprehensive range of doors and door fabrication services available in the UK. This includes our unique Poddoor™ system which fully integrates doorsets into drywall partitions, resulting in improved efficiency, performance and finish quality.

PODDOOR™

BESPOKE FIT-OUT

With over 35 years of specialist joinery experience, Swift Horsman is able to offer the most comprehensive bespoke fit-out service within the education sector. From design to installation we are renowned for the fit-out of complex areas such as theatres, recording studios and reception areas. We are therefore perfectly placed to meet the demands imposed by modern education environments.
