

# Laboratories

Traditional laboratory fit-out is complex and high risk. Labwall™ offers an incredibly high standard of laboratory provision, concealing services, simplifying maintenance and removing the majority of the installation risk.

- Designed to integrate services into a wall system, rather than under the floorslab, to increase flexibility and simplifying installation
- Developed with our supply-chain from conception to installation to ensure a fully integrated solution
- Off-site manufactured, using our extensive experience in light steel frame technology, to enhance quality, reduce risk and minimise waste
- Designed to substantially reduce on-site installation time, reduce site labour and make the work-face safer
- Engineered to conceal and protect services, to reduce the likelihood of damage and simplify maintenance
- Available as a complete solution encompassing full laboratory fit-out or as a walling system to which benches and furniture can be subsequently fitted
