

M&E Fit-out

The advantages of M&E service modularisation are far-reaching and projects that employ Swift Horsman as part of their strategic development are realising significant benefits.

- A comprehensive design and development capability working closely with our supply-chain partners to arrive at the best solutions quickly and efficiently
- An array of modular M&E building service solutions; pipework modules, valve sets, robust and flexible integrated plumbing systems and ceiling modules, utilising innovative systems and materials
- Off-site testing and commissioning, enhanced quality control and a high degree of process efficiency
- Savings in on-site build programmes, labour time and cost, while reducing risk, waste, snagging and call-backs due to improved quality of installation
- Contingency warehouse storage, enabling the absorption and release of programme construction delays, providing further flexibility and reducing the likelihood of theft or losses
